COPY

Dear Examiner:

For your consideration:

A method of selecting forward error correction parameters in a channel having a plurality of subchannels in a multicarrier communications system, comprising:

storing, in one or more tables, a net coding ~~gain~~ gains for a plurality of values of signal-to-noise ratios and numbers of subchannels, the net coding ~~gains~~ gain being based on a one or the values of corresponding to the signal-to-noise ratios and ~~one of~~ the numbers of subchannels[[;]] for different values of forward error correction parameters, including a number (s) of discrete multi-tone symbols in a forward-error-correction frame, a number (z) of forward-error-correction control symbols ~~in a discrete multi-tone symbol~~, and a maximum number of transmissions (k), ~~for different values of s, z and k;~~

determining a signal-to-noise ratio representing a subset of the subchannels to provide a representative performance measurement; and

using the tables, selecting values of s, z and k based on at least the representative performance measurement and the net coding ~~gains~~ gain by applying an approximation to a subset of the values in the table.

Best regards, Ernie Beffel

TRANSMITTAL OF RESPONSE TO OFFICE ACTION

Sir:

In connection with the above-referenced U.S. patent application, transmitted herewith are the following papers:

- [X] **Response to Office Action of 19 NOVEMBER 2004**, for which no claims fee is due.
- [X] Check No. 3183 in payment of a one-month extension fee (\$120).
